

ADITYA CHAUDHARY

Software Developer | Python, Java, C++ & SQL

aditya.879161@gmail.com | +91 8791683506 | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

MCA student with a Bachelor of Computer Applications and hands-on experience developing Python-based applications, backend systems, REST APIs, database-driven solutions, and machine learning projects. Skilled in Python, Java, C++, SQL, Flask, REST APIs, MySQL, SQLite, Git, and GitHub. Experienced in building end-to-end projects involving application development, backend implementation, data processing, authentication, dashboards, and machine learning integration.

TECHNICAL SKILLS

Programming: Python, Java, C++, JavaScript, SQL

Web Development: Flask, HTML, CSS, JavaScript, REST APIs

Databases: MySQL, SQLite, MongoDB

Software Development & Tools: Git, GitHub, VS Code, Excel, Google Sheets

Data & Machine Learning: Pandas, NumPy, Scikit-learn, Matplotlib, Data Cleaning, Exploratory Data Analysis (EDA), Data Visualization, Machine Learning

PROJECTS

NuroTrack – AI Productivity Monitoring System

2026

Python, Flask, Firebase, SQLite, Chart.js, Scikit-learn

GitHub

- Developed an AI-powered productivity monitoring application to track real-time desktop activity and analyze user behavior patterns.
- Built a Flask-based backend with REST APIs for activity tracking, productivity analytics, and report generation.
- Integrated a **Gradient Boosting** machine learning model to predict productivity scores (NuroScore) from user activity data.
- Developed an interactive dashboard featuring productivity charts, application usage insights, daily reports, and task management.
- Implemented **Firebase Authentication** for secure login and user session management.

CyberShield – Network Threat Detection System

2026

Python, SQL, Scikit-learn, Flask

GitHub

- Developed a network threat detection application to analyze network activity and classify events as Normal or Suspicious.
- Built a **Random Forest** machine learning model using network traffic features for automated threat classification and risk analysis.
- Developed a Flask-based web dashboard for real-time threat analysis and security event monitoring.
- Implemented SQL queries to analyze network logs and identify suspicious activity patterns for investigation.

Telecom Customer Churn Analysis

2026

Python, SQL, Pandas, Scikit-learn, Matplotlib

GitHub

- Developed a Python and SQL-based analysis solution using **7,043 telecom customer records** to identify factors influencing customer churn.
- Implemented exploratory data analysis and SQL-based customer segmentation across tenure, services, and payment methods.
- Compared multiple machine learning models for customer churn prediction.
- Selected **AdaBoost** based on the highest cross-validation **ROC-AUC score of 0.8466**.

EDUCATION

Master of Computer Applications (MCA)

2026 – Present

Graphic Era University, Dehradun

Bachelor of Computer Applications (BCA)

2023 – 2026

Graphic Era University, Dehradun

GPA: 7.60/10.0

CERTIFICATIONS

- Data Analysis with Python** – IBM Skills Network / Cognitive Class
- SQL and Relational Databases 101** – IBM Skills Network / Cognitive Class

ACHIEVEMENTS

- Served as **Core Team Member** for a 24-hour Hackathon hosted by Co-Dev Club and Coding Ninjas.

RELEVANT COURSEWORK

Data Structures and Algorithms, Operating Systems, Database Management Systems, Computer Networks
